ORANGE, Calif., June 6, 2017 /PRNewswire/ -- IntelliPower, Inc., the foremost supplier of rugged, back-up power protection solutions for the military, announced the launch of one of its most versatile UPS systems for DoD shipboard applications. The 6000 VA, 4200 W unit is designed with dual voltage output capability of both 115 VAC @ 1360 Watts and 208 VAC at 2840 Watts and includes an automatic bus transfer function that allows the connection of the two vital sources of power on board the ship to electronic equipment, i.e., port and starboard power. In the event of a voltage disturbance or catastrophic outage, power is automatically transferred without interruption from one source to the other.

"Due to mission-critical system requirements on board military ships, the need for seamless, continuous, automated UPS systems are essential when power failure is not an option," said Bill Shipman, president and CEO of IntelliPower. "We have almost 3 decades of experience meeting the Navy and other MIL-STDs required for rugged, military applications and are proud to be part of these technological advances to our military fleet."

About IntelliPower

Founded in 1988, IntelliPower designs, manufactures and supports high performance, cost effective, intelligent, reliable power protection systems for harsh environments. All products are developed by IntelliPower hardware and software engineers and manufactured in the U.S.A. in our ISO 9001:2008 certified facilities and are successfully installed around the globe.

IntelliPower is the largest supplier of high reliability, rugged COTS UPS systems for the military. We are the UPS vendor of choice for large DoD programs such as the Army's Win-T, Navy's CANES and Marine Corps' DDS-M programs and vendor of choice for UAV controller back up support systems for the Air Force, Army and Navy of many nations.

IntelliPower is the industry leader for industrial and mission-critical commercial applications offering True Digital Technology Double Conversion On-Line solutions, modular configurability, DSP software technology, galvanic isolation and more than 400 enclosure designs.

All IntelliPower products are designed, built and supported in the U.S.A. Delivered around the globe, our solutions are used for military, industrial and mission-critical commercial applications. For more information, please call 714-921-1580 or visit www.intellipower.com.
